

## RMT: eAWPS Building Block

RMT is an integral part of the Enterprise Army Workload and Performance System (eAWPS) a suite of enterprise tools that also includes EMDS, Work Mapping Tool (WMT) and Army Workload and Performance System (AWPS). These tools pull source data from across the enterprise into a Total Army Data Environment enabling leaders at every level to see the same data based on their decision-making requirements. The eAWPS supports the Warfighting Support Forces' enhanced situational awareness with:

- ★ Improved data sharing across Army domains and functional areas
- ★ Increased responsiveness
- ★ More robust, accessible, timely, and accurate operational and resource information
- ★ Output-oriented planning and decision support across the spectrum of Army Business

CHANGING THE WAY  
WE DO BUSINESS

## Resource Management Tool (RMT)

Integrating  
Financial Data with  
Manpower Data to Support  
Resource Management,  
Workload Forecasting, and  
Performance Measurement

**eAWPS**  
Enterprise Army Workload and  
Performance System

## What is RMT?

RMT is a Web-enabled suite of resource management software tools that integrates financial (program, budget, funding and standard account system (STANFINS) Accounting) and manpower (authorizations, force structure and personnel) data into a single package.

## Goals & Objectives

RMT will create an Army solution for synchronizing dollars, manpower, personnel data at the command and organizational levels that:

- ★ Integrates financial data
- ★ Facilitates the management of current year execution of dollars and manpower distribution, workload forecasting, and performance measurement
- ★ Enable the synchronization of dollar and manpower program and budget submissions back to Headquarters, Department of the Army (HQDA)
- ★ Replaces numerous command-unique and single-function systems with a single Web-enabled software tool

## Enabling Business Transformation

The Army is in the midst of a significant Business Transformation (BT) effort. This will change how the Army does business fundamentally by applying proven business processes in order to provide the necessary capabilities effectively and efficiently to the Combatant Commanders in support of National Security and Defense Strategies. RMT supports BT by:

1. Transforming Resource Management business practices below HQDA
2. Providing an authoritative financial source and a format for earned value management and workload programming (Army Workload and Performance System (AWPS))
3. Providing crucial financial, manpower, and personnel data to facilitate Lean Six Sigma projects
4. Enabling the success of other applications such as Enterprise Management Decision Support (EMDS) by providing an authoritative data source for resource data

**RMT is a key resource management initiative**

## CHANGING THE WAY WE DO BUSINESS

### Impacting Today

Today's Army budgeting, manpower distribution, workload forecasting, and performance measurement systems do not function as an integrated process because of the diverse command-unique and single-function information systems used to track resources, workload, and performance. RMT provides HQDA with complete visibility of budget execution (commitments and obligations). It standardizes resource management processes at Army Commands, Army Service Component Commands and Direct Reporting Units (ACOM/DRU) which enables efficiencies in resource management and provides critical information for program and budget management. RMT also provides a common architecture for transition to General Fund Enterprise Business System (GFEBS), the Army's principal financial transformation initiative.

### Impacting Tomorrow

Full roll out of RMT will result in a single, integrated data environment that supports Army budgeting, manpower distribution, workload forecasting, and performance measurement.

### *RMT Services at the Operational Level*

Reporting Previous Fiscal Year (FY)s	Managing Current FY	Forecasting Future FYs
Year-end reports	Set funding targets Reports actual funding disbursements relative to targets	Program budget and manpower estimates Source data for Program Objective Memorandum (POM) or Budget Estimate Submission (BES)
